

Mean POH length of Harrison River Chum

Notes:

- This data only represents Harrison River chum salmon that were sampled as part of the Mark-Recapture program, conducted by Sts'ailes First Nation and J.O. Thomas and Associates. It cannot be used to represent the biological characteristics of all Fraser River chum.
- This is the average POH length by sex across all ages
- Based only on the annual averages, there has been a small but statistically significant decline in POH length since 1995 for both male and female Harrison chum
- Some years of data are not included because the scale samples were not read for ages or data was not available
